

I CLAIM:

1. A device attached on bicycles for walking dogs comprising:

a fixed clip, an auxiliary rod, a main rod and a spring,  
5 said fixed clip is fixed on a rod of a bicycle, one end of  
said spring is for a hook of a string to hook on, said fixed  
clip and said auxiliary rod employ a plurality of screws to  
connect together, said auxiliary rod having a hole, a U-shaped  
elastic piece is disposed inside said main rod, an elastic ball  
10 is disposed on one end of said U-shaped elastic piece, said  
elastic ball is exposed outside of a hole of said main rod,  
said elastic ball is inserted inside said hole of said auxiliary  
rod so that said main rod and said auxiliary can be connected  
together, one end of said main rod is in curved shape with a  
15 plurality of convex dots on it for said downwardly pointing  
spring to sleeve on, the bottom end of said spring is a rod  
body with a hook, accordingly, press the elastic ball to detach  
said auxiliary rod from said main rod, said spring is pointing  
downward, it features characteristics of firm structure, easy  
20 assembly and detachment, it can also shorten the length extended  
outward and is suitable for the height of the dog.

2. As claimed in Claim 1, said fixed clip having a pair of  
semi-spaces and a plurality of holes for inserting said  
auxiliary rod, a plurality of screws are used for screwing into  
25 said holes to connect said auxiliary rod and said fixed clip.
